Over the last decade, the tailoring of a light field for manipulating the dynamics of a system at the quantum level has taken a prevalent role in modern atomic, molecular and optical physics.

The first conference of the triannual ICOMP series was held in Rochester in 1977. Budapest already hosts ICOMP for the second time, after having been the venue of the conference in 1980. As professors Yamanouchi and Midorikawa have formulated the importance of the ICOMP series recently, "This conference series has been essential in deepening of our understanding of multiphoton phenomena ...

Abstract. Interactions between a three-level atom and two amplitude-fluctuating lasers are studied theoretically. One interesting feature of the interactions is the influence of the finite laser bandwidth and the two-laser cross-bandwidth on the absorption rate into the third level.
