On Feathered Wings: Birds in Flight by Richard Ettliger

When we imagine birds, we think of them soaring through the sky, high above our headsâ€”yet photographs of birds in the air are surprisingly rare. On Feathered Wings features the work of seven photographers who have spent their lives camping out, donning waders, and lying in wait for the greatest shots of birds doing what they do best: flying!

On Feathered Wings: Birds in Flight - Richard Ettliger

A bizarre hind wing formed by large pennaceous feathers (feathers with stiff vanes) along the metatarsus is known in several non-avian dinosaurs (1â€”4) and may have played an important role in the evolution of flight on the line to birds (1â€”7).

From baby birds to feathered dinosaurs: incipient wings

Feathers are epidermal growths that form the distinctive outer covering, or plumage, on birds and other, extinct species of dinosaurs. They are considered the most complex integumentary structures found in vertebrates and a premier example of a complex evolutionary novelty. They are among the characteristics that distinguish the extant birds ...
