PDF As globalization continues to impact the world, it challenges us to critically examine pertinent socioeconomic and political issues of our time, many that have a direct bearing on the process of education as it relates to social justice. At the center of this social genesis is youth resistance research, which has become a global phenomenon. This is in light of the disturbing fraught of ...

Youth Resistance Research and Theories of Change edited by

associated with youth resistance training, it is pertinent to define key terminologies used throughout the manuscript. Childhood represents the developmental period of life from the end of infancy to the beginning of adolescence. The term children refers to girls and boys (generally up to the age of 11 years and 13 years respectively) who have not developed secondary sex characteristics ...

UKSCA Position Statement: Youth Resistance Training

Research that supports the utility of youth resistance training in the acquisition of favorable degrees of health-associated characteristics is expanding . Moreover, the contention that the overall health of children and adolescents is likely to improve rather than be adversely affected by regular participation in a resistance training program is supported by statements from professional ...

Youth Resistance Training: Updated Position Statement

Well-designed longitudinal epidemiological studies are needed to understand better the long-term effects of structured resistance training on youth. This research should ensure the collection of exposure data (time exposed) to support injury incidence determination and comparisons with other sports and recreational activities. Accurate recording of information such as equipment design and ...

Youth Participatory Action Research

Youth strength training programs should start with 1 to 2 sets per exercise, with 6 to 15 repetitions in each set. For children and adolescents, the initial load should be selected so that 10 to 15 repetitions can be completed with some fatigue but no muscle failure. 14 In general, resistance can be increased by 5% to 10% when the child can easily perform 15 repetitions.
